Dataset Used

[https://drive.google.com/file/d/1bM4xqjoJA6vdM9oyrjBs58HB2dU7aNrd/view?usp=drive link](https://drive.google.com/file/d/1bM4xqjoJA6vdM9oyrjBs58HB2dU7aNrd/view?usp=drive_link)

Our dataset contains data of the timeframe : January 2020 to March 2020

1. Introduction

1.1 Overview

Our project is a comprehensive analysis of COVID-19 using Tableau software. It focuses on the time period of January 2020 to March 2020 and aims to provide insights into the spread and impact of the virus during that time frame.

The project incorporates 10 different visualizations, each designed to highlight specific aspects of the COVID-19 data. These visualizations include charts, graphs, maps, and other visual representations, all created using Tableau's powerful visualization capabilities.

To present the findings in a cohesive manner, we have developed a dashboard that brings together the various visualizations into an interactive interface. This dashboard allows users to explore the data and gain a comprehensive understanding of the COVID-19 situation during the specified time period.

Furthermore, our project includes a storytelling component, where we have crafted a narrative that guides the audience through the analysis process. This storytelling aspect helps to effectively communicate the key insights and trends discovered in the COVID-19 data.

Overall, our project provides a holistic view of COVID-19, examining its spread, impact, and trends during the early months of the pandemic. By leveraging Tableau's capabilities, our analysis and visualizations offer valuable insights that can inform decision-making, raise awareness, and contribute to the understanding of the pandemic's progression.

1.2 Purpose

The purpose of our project on COVID-19 analysis using Tableau software, with 10 different visualizations, a dashboard, and a story, is to gain insights and understanding into the spread and impact of the virus during the time period of January 2020 to March 2020. By analyzing the available data and presenting it visually, our project aims to achieve the following:

Identify Patterns and Trends: Through the visualizations and analysis, we can identify patterns and trends in the COVID-19 data. This includes tracking the spread of the virus across regions, identifying areas with high case counts, and observing changes in infection rates over time.

Assess the Impact: Our project allows for an assessment of the impact of COVID-19 during the specified time frame. This includes understanding the severity of the virus, examining mortality rates, and evaluating the strain on healthcare systems.

Inform Decision-Making: The insights gained from our project can inform decision-making processes. By visualizing the data, policymakers, public health officials, and researchers can gain a better understanding of the situation and make informed decisions regarding interventions, resource allocation, and public health measures.

Communicate Findings Effectively: Through the dashboard and story we created, we can effectively communicate the key findings and insights derived from the COVID-19 data. This helps in raising awareness among the general public, stakeholders, and decision-makers about the impact of the virus during that specific time period.

Contribute to Knowledge and Research: By conducting this analysis and presenting the results, our project contributes to the collective knowledge and research surrounding COVID-19. The insights gained can serve as a valuable resource for further studies, comparisons with future data, and understanding the progression of the pandemic.

Overall, the purpose of our project is to have informed decision-making, raise awareness, and contribute to the broader understanding of the pandemic.

2. Literature Survey

2.1 Existing Problem

The existing problem in your project revolves around analyzing and understanding COVID-19 data for the time period of January 2020 to March 2020 using Tableau. The challenge lies in extracting meaningful insights from the data and effectively communicating those insights through visualizations and storytelling.

2.2 Proposed Solution

Documentation and Analysis: Document the process and steps to be taken to analyze the COVID-19 data using Tableau. Detail the methodologies to use, including data sources, cleaning and preprocessing techniques, and any assumptions to make during the analysis.

Visualizations: Showcase the 10 different visualizations we plan to create using Tableau. Highlight the key insights and trends depicted in each visualization, explaining how they contribute to a better understanding of the COVID-19 situation during the specified time frame.

Dashboard: Create and present the dashboard, which brings together multiple visualizations into a cohesive and interactive interface. Explain the rationale behind the design choices made for the dashboard and how it provides a comprehensive overview of the COVID-19 data.

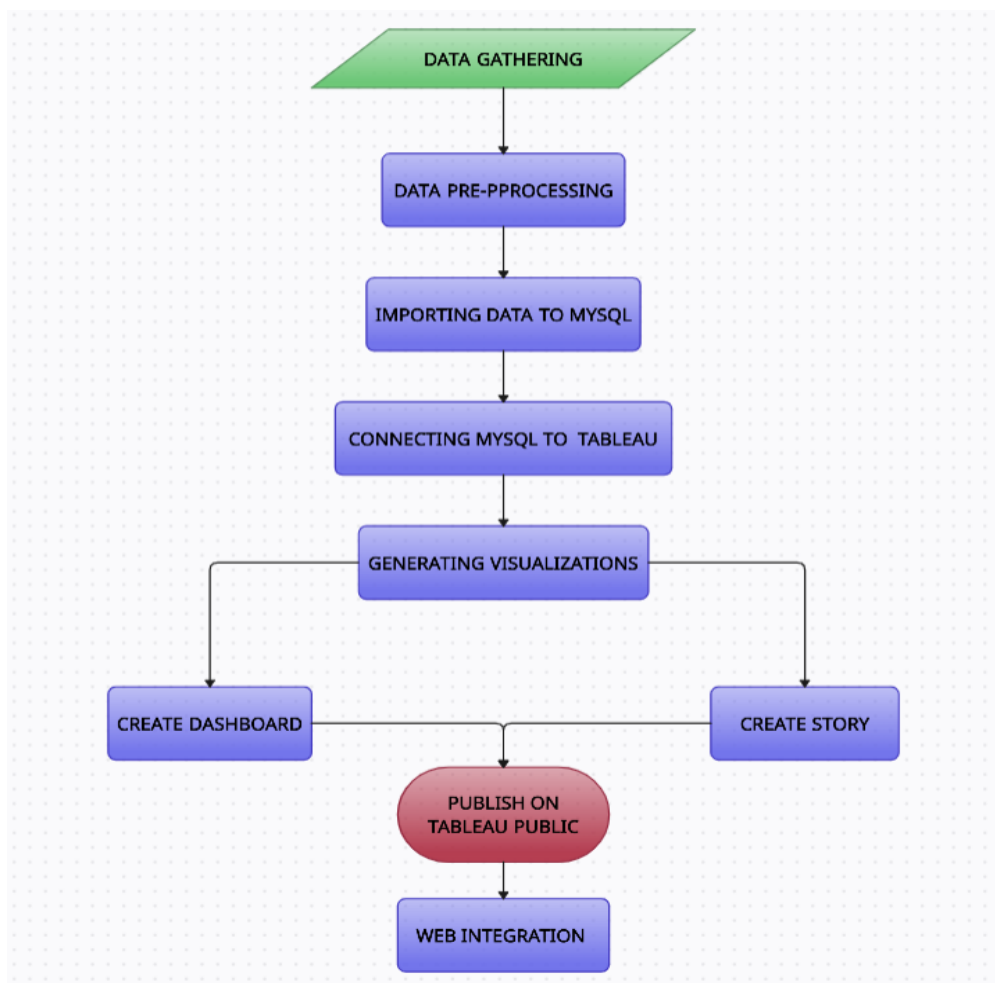

Storytelling: Create and share the story you crafted using Tableau, which narrates the progression and impact of COVID-19 during the specified time period. Discuss the flow of the story, including the key moments and insights highlighted, and how it guides the audience through the analysis process.

Findings and Insights: Summarize the significant findings and insights obtained from your analysis. Discuss any patterns, correlations, or anomalies discovered in the data, emphasizing their implications and potential for informing public health strategies or decision-making.

Share the findings: Share the Dashboard and Story to Tableau Public. Perform Web Integration using Bootstrap and Flask and share the links.

3. Theoretical Analysis

3.1 Block Diagram

3.2 Hardware/ Software Designing

MS Excel to view the excel data. MySQL to load the data in the database. Need Tableau Software installed on Desktop. Need to have an account on Tableau Public. No hardware requirement.

4. Experimental Investigations

Analysis through various visualizations are made. We investigated the distribution of confirmed, cured and deaths across all the states of India for the given time period. We made use of various different kinds of charts to gain multiple insights.

5. Flowchart/Procedure

5.1 Data Gathering : Obtaining the data file.

5.2 Data Cleanup: Cleaning data, removing incomplete or inaccurate data.

5.3 Importing data to MySQL

<https://drive.google.com/file/d/1hkQjE4-oHPbKdevosBqCCjjPhuY7Bv2P/view?usp=drive link>

5.4 Connecting MySQL data to Tableau

<https://drive.google.com/file/d/1K-2Dsd4z2Rb1CXnzDynkKULnHHx7cV1v/view?usp=drive link>

5.5 Generating suitable visualizations

5.6 Creating a dashboard

<https://drive.google.com/file/d/1ejxIGWTzunNhWSCwgVPOZkklZM2VbNU3/view?usp=drive link>

5.7 Creating a story

https://drive.google.com/file/d/1b8X-URiz-GydiULqvUeh1aHVb_FJxm50/view?usp=drive link

5.8 Publishing the dashboard and story on Tableau Public

https://drive.google.com/file/d/1G2Xe71w8SEZpUfSxra5G2kNj9Dx_ayzQ/view?usp=drive link

5.9 Web Integration using bootstrap and flask

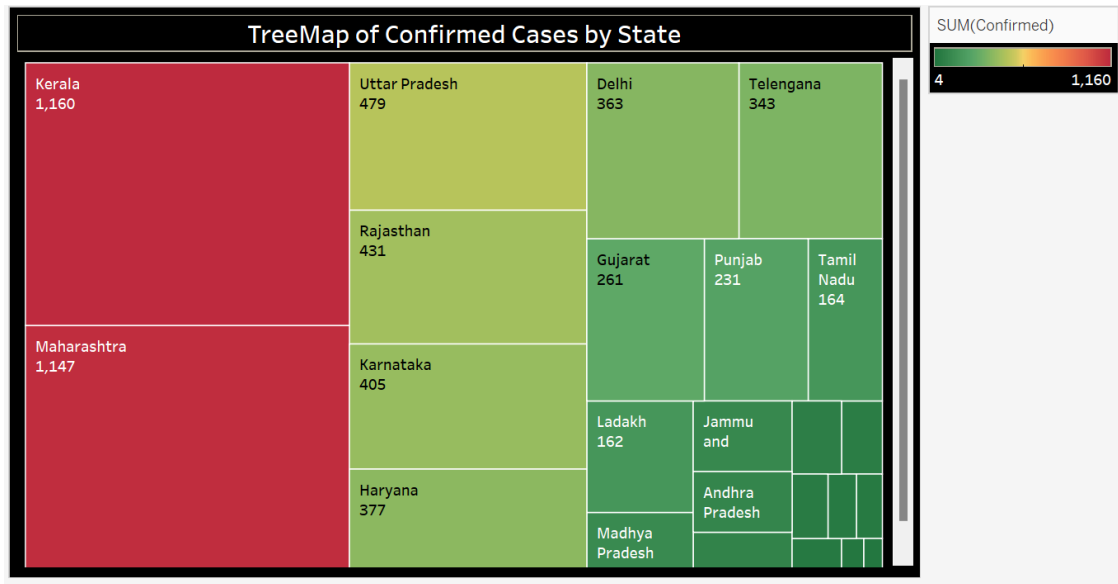

<https://drive.google.com/file/d/1uB3Qvzu9LbRI4r25VXhklpJOtsvlbbws/view?usp=drive link>

5.10 Preparing well-oriented project report documenting all steps

7. Advantages and Disadvantages

Advantages

- **Enhanced Understanding:** The project provides a deeper understanding of the early spread and impact of COVID-19 during the specified time frame.
- **Visual Insights:** Data visualization on Tableau enables clear and visually appealing representations of complex COVID-19 data, making it easier to comprehend and communicate.
- **Identifying Hotspots:** The project helps identify regions that experienced significant surges in COVID-19 cases, aiding in targeted intervention and resource allocation.
- **Informing Decision-Making:** The project's insights can inform public health strategies, guide policy decisions, and support proactive measures for pandemic response.
- **Awareness and Education:** By presenting the findings through visualizations, the project helps raise awareness and educate the public about the severity and rapid spread of COVID-19.

Disadvantages

- **Limited Time Frame:** The project focuses on a specific time period, which may restrict the scope of analysis and understanding of long-term trends or evolving dynamics.
- **Data Availability and Accuracy:** The project's effectiveness relies on the availability and accuracy of the COVID-19 data sources used, which may vary or contain potential inaccuracies.

-
- **Changing Landscape:** The project reflects the understanding and circumstances of COVID-19 during the specified time frame and may not capture the latest developments or trends.
 - **Incomplete Understanding:** The project's analysis may be limited by the absence of data attributes such as gender, age, and occupation of individuals affected by COVID-19. These demographic factors play crucial roles in understanding differential impacts, risk factors, and potential disparities within the population.

8. Applications

- Tracking early spread and identifying regions heavily impacted by COVID-19.
- Analyzing hotspots and areas with a significant surge in cases during that period.
- Assessing the strain on healthcare systems and identifying areas requiring additional resources.
- Examining COVID-19-related mortality rates and identifying vulnerable populations.
- Comparing data across countries to understand variations in the spread and containment measures.
- Informing public health strategies by evaluating the effectiveness of early containment measures.
- Raising awareness about the severity and rapid spread of COVID-19 during that time period.

9. Conclusion

Through data visualization and analysis on Tableau, this project has provided valuable insights into the early spread and impact of COVID-19. By examining the data during the specified timeframe, we were able to track the virus's progression, identify heavily impacted regions, assess the strain on healthcare systems, and understand mortality rates. The project also facilitated comparisons across the states of India, enabling us to evaluate the effectiveness of containment measures and inform public health strategies.

These findings highlight the urgency of early intervention and the importance of proactive measures in mitigating the spread of COVID-19. The project's visualizations and analysis serve as a powerful tool for raising awareness about the severity of the pandemic during the early stages. The insights gained from this project contribute to the global understanding of COVID-19 and can inform future strategies for pandemic response.

Overall, this project emphasizes the significance of data-driven approaches in combating public health crises. By harnessing the power of data visualization and analysis, we can gain critical insights, make informed decisions, and work towards effective measures to protect public health and well-being.

10. Future Scope

The future scope is to extend the analysis to the data of a larger time frame analyzing data from 2020 to 2022. We can also include more data attributes like the gender, age, occupation of people affected and how covid impacted different businesses, its economic and social impact.
